

Silicon cleaning pump is used to clean inside of the mixer. Pump system is using high pressurized solvent. After cleaning of the mixer section, by 5 minutes closed cycle allows all off the system is free of silicon particles and thus provides long-term life for the silicon machine without any changes on the working characterization. Also in case of power cut, the system prevents freezing of the mixer due to working with the air. After cleaning the system, solvent material inside of the line is cleaned using pressurized air.

Technical Data

	Drum Size	Drum Capacity	Hose Length
SC200	400x675 mm	80 lt	2,5 m

Features

- ✔ Pump system for high pressurized solvent system,
- ✔ Closed cycle system for perfect material cleaning of the extruder,
- ✔ Ability to work with air system in case of power cut
